

GEMÜ 639 eSyStep

Motorized diaphragm valve

Features

- CIP/SIP capable (only with stainless steel distance piece)
- Open/close function or with integrated positioner
- Actuating speed max. 3 mm/s
- Parameterizable via IO-Link
- On-site or remote end position programming via programming input
- Various functions integrated (e.g. feedback, stroke limiter, etc.)

Description

The GEMÜ 639 diaphragm valve is actuated by a compact motorized spindle actuator with step motor. Depending on the version, the valve is available for OPEN/CLOSE or simple control applications. The actuator has an integrated IO-Link interface for parameterization and diagnosis purposes. The self-locking actuator holds its position in a stable manner when idle and in the event of power supply failure.

Technical specifications

- Media temperature*: -10 to 100 °C
- Ambient temperature*: 0 to 60 °C
- Sterilization temperature: max. 150 °C
- Operating pressure*: 0 to 10 bar
- Nominal sizes*: DN 4 to 25
- Body configurations: 2/2-way body | i-body | Multi-port body | T body | Tank valve body | Welding configuration
- Connection types: Clamp | Flange | Spigot | Threaded connection
- Connection standards: ANSI | ASME | BS | DIN | EN | ISO | JIS | SMS
- Body materials: 1.4408, investment casting material | 1.4435 (316L), forged material | 1.4435 (BN2), forged material | 1.4435, investment casting material | 1.4539 (904L), forged material
- Diaphragm materials: CR | EPDM | FKM | NBR | PTFE/EPDM
- Supply voltage: 24 V DC
- Actuating speed: max. 3 mm/s
- Protection class: IP 65
- Conformities: BSE/TSE | FDA | Oxygen | Reg. (EU) No. 10/2011 | Regulation (EC) No. 1935/2004 | Regulation (EC) No. 2023/2006 | TA Luft (German Clean Air Act) | USP

GEMÜ CONEXO

The interaction of valve components that are equipped with RFID chips and an associated IT infrastructure actively increase process reliability.

Thanks to serialization, every valve and every relevant valve component such as the body, actuator or diaphragm, and even automation components, can be clearly traced and read using the CONEXO pen RFID reader. The CONEXO app, which can be installed on mobile devices, not only facilitates and improves the "installation qualification" process, but also makes the maintenance process much more transparent and easier to document. The app actively guides the maintenance technician through the maintenance schedule and directly provides him with all the information assigned to the valve, such as test reports, testing documentation and maintenance histories. The CONEXO portal acts as a central element, helping to collect, manage and process all data.

Ordering

GEMÜ Conexo must be ordered separately with the ordering option "CONEXO" (see order data).

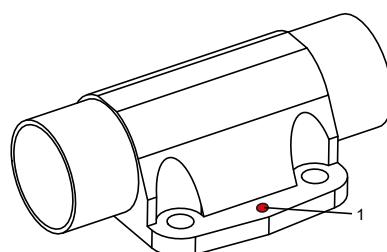

For electronic identification purposes, each replaceable component contained in the product is equipped with an RFID chip (1). Where you can find the RFID chip differs from product to product.

Actuator RFID chip

Diaphragm RFID chip

Valve body RFID chip

The CONEXO pen helps read out information stored in these RFID chips. The CONEXO app or CONEXO portal is required to view this information.

- 1) Surface finishes of customized valve bodies may be limited in special cases.
- 2) Or any other finishing method that meets the Ra value (acc. to ASME BPE).
- 3) The smallest possible Ra finish for pipe connections with an internal pipe diameter < 6 mm is 0.38 µm.
- 4) When using these surfaces, the bodies are marked according to the specifications of ASME BPE.
The surfaces are only available for valve bodies which are made of materials (e.g. GEMÜ material codes 40, 41, F4, 44)) and use connections (e.g. GEMÜ connection codes 59, 80, 88) according to ASME BPE.
- 5) Not possible for GEMÜ connection code 59, DN 8 and GEMÜ connection code 0, DN 4.

Technical data

Medium

Working medium: Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.
For special oxygen version (code S):only gaseous oxygen

Temperature

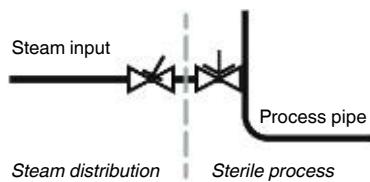

Media temperature:

Diaphragm material	Standard	Special version oxygen
NBR (Code 2)	-10 to 100 °C	-
FKM (Code 4)	-10 to 90 °C	-
CR (Code 8)	-10 to 100 °C	-

EPDM (Code 14)	-10 to 90 °C	-
EPDM (Code 17)	-10 to 100 °C	-
EPDM (Code 36)	-10 to 100 °C	-
PTFE (Code 54)	-10 to 100 °C	-

Sterilisation temperature: EPDM (Code 13) max. 150 °C, max. 60 min per cycle
EPDM (Code 17) max. 150 °C, max. 180 min per cycle
EPDM (Code 36) max. 150 °C, max. 60 min per cycle
PTFE (Code 54) max. 150 °C, permanent temperature per cycle

The sterilisation temperature is only valid for steam (saturated steam) or superheated water. If the sterilisation temperatures listed above are applied to the EPDM diaphragms for longer periods of time, the service life of the diaphragms will be reduced. In these cases, maintenance cycles must be adapted accordingly.

PTFE diaphragms can also be used as moisture barriers; however, this will reduce their service life. This also applies to PTFE diaphragms exposed to high temperature fluctuations. The maintenance cycles must be adapted accordingly. GEMÜ 555 and 505 globe valves are particularly suitable for use in the area of steam generation and distribution. The following valve arrangement for interfaces between steam pipes and process pipes has proven itself over time: A globe valve for shutting off steam pipes and a diaphragm valve as an interface to the process pipes.

Ambient temperature:

0 to 60 °C*

All pressures are gauge pressures. Operating pressure values were determined with static operating pressure applied on one side of a closed valve. Sealing at the valve seat and atmospheric sealing is ensured for the given values.

MG = diaphragm size, Kv values in m³/h

Kv values determined in accordance with DIN EN 60534 standard, inlet pressure 5 bar, Δp 1 bar, stainless steel valve body and soft elastomer diaphragm. The Kv values for other product configurations (e.g. other diaphragm or body materials) may differ. In general, all diaphragms are subject to the influences of pressure, temperature, the process and their tightening torques. Therefore the Kv values may exceed the tolerance limits of the standard.

Vibration: 5g acc. to IEC 60068-2-6 Test Fc

Shock: 25g acc. to 60068-2-27 Test Ea

Duty cycle and service life

Service life:

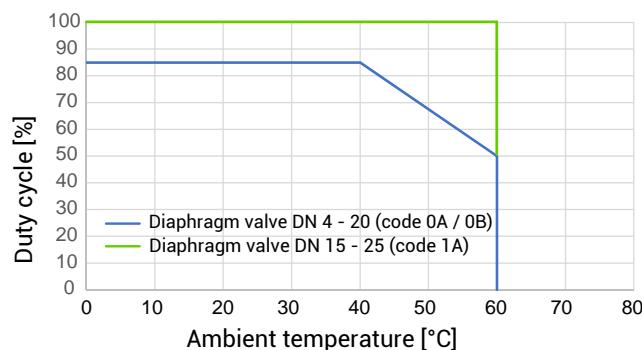

Control operation - Class C according to EN 15714-2 (1,800,000 starts and 1200 starts per hour).

Open/Close duty - At least 500,000 switching cycles at room temperature and permissible duty cycle.

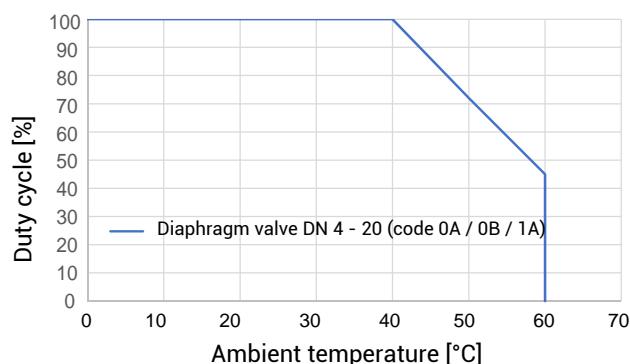

Duty cycle:

Control module Open/Close control (code AE)

Duty cycle with full valve lift and playing time 10 minutes.

Control module Positioner (code S0), Open/Close duty

The specified curves and values apply to the factory setting.

With reduced forces, higher duty cycles and/or higher ambient temperatures are possible. At higher force settings the duty cycle and/or ambient temperature is reduced (for IO-Link parameters see operating instructions).

NOTICE

The factory default setting is reset to default settings when a reset is carried out.

NOTICE

When configuring the emergency power module (code A5 / A6), the control of the valve changes. Valve is controlled 1-pole via digital input 1. Level logic 1 moves the valve OPEN, level logic 0 moves the valve CLOSE.

GEMÜ 1571

Emergency power supply module

The capacitive emergency power module GEMÜ 1571 is suitable for valves with motorized actuators such as GEMÜ eSyStep and eSyDrive. In the event of a power failure, the product provides an uninterrupted power supply so that the valve can be moved to the safety position. The emergency power module has a capacity of 1700Ws. The input and output voltage is 24 V.

Switching power supply unit

The switching power supply unit GEMÜ 1573 converts unstabilized input voltages of 100 to 240 V AC into a constant output voltage of 24 V DC. The product can be used as an accessory for valves with motorized actuators such as GEMÜ eSyStep und eSyDrive. Different powers and output currents are available.
