Trunnion Mounted Ball Valves

Springless Top Entry Ball Valves

IMI Truflo Rona Top Entry Ball Valves are designed and manufactured to meet the most stringent requirements in all critical applications for the oil & gas, chemical & petrochemical industries, PTA (Purified Terephthalic Acid) plants, Liquefied Natural Gas plants, LNG Carriers and LNG Terminals. Our Springless Top Entry Ball Valves feature the unique "Springless Wedge Design".

Key features

- > Top entry allowing in-line maintenance
- > Trunnion mounted design
- > Wedge access design
- > Bi-directional tight shut-off
- > Bi-directional fire safe
- > Self leveling seats
- > Anti-blowout stem
- > Wide range of sealing combinations
- > Anti-static device
- > Variety of end connections

Benefits

- > Exclusive Wedge-Seat Design
 - Seats are self-adjusting, assuring leak-tight closure under all operating conditions and valve orientations.
 - Automatic compensation for changes that occur as a result of varying pressure, temperature and wear.
 - Sealing elements are kept in tight contact with the ball to assure an even load on the seats at all pressures, temperatures and at all stages.
 - Ball is wiped clean each time the valve is operated.
 - Ball-seat contact is constantly maintained, extending seat life.
- > Minimal number of components
- > Top-Entry configuration allows fast, easy, in-line service and permits emergency situations to be safely and quickly resolved
- > All working parts are accessible for service
- > No special tools or training required for maintenance and repair

Applications

- > Liquefaction of Natural Gas
- > Process fluids
- > Hydrocarbons
- > Steam / geothermal steam
- > Hot gas / sour gas (NACE)
- > Oxygen / hydrogen
- > Blow down
- > Sulphur recovery
- > Acid / caustic / chloride
- > Abrasive service

Structural design optimised

Our Top Entry Ball Valve is fully integrated into the high pressure unloading arm for LNG Floating Storage Regasification Unit in Brazil's Guanabara Bay LNG Terminal

In-house full range cryogenic testing

Product specification & dimensions

Size range	
API 6D/6DSS	1/2" through 24"
API 6A	1-13/16" > 13-5/8"
DN	DN12 > DN 1500

Pressure range	
ANSI Class	150 > 4500
API Rating	2000 > 20000
PN Rating	PN16 > PN420

Temperature range	
	-196°C to +650°C
	-385°F to +1200°F

End connection	
ANSI flanges	ANSI B16.5 / ANSI B16.47
Compact flanges	NORSOK L-005
Special flanges	Designed as required
Hubs	All major hub end design available
Welding ends	Butt or socket welding ends with or without pup pieces

Operation	
Manual	
Actuated	

Materials	
CS & LTCS	
Stainless steel	
Duplex	
Super duplex	
Titanium	
Hastelloy	
Incoloy	
Inconel	
Zirconium	
Monel	

Class 150 to 1500
Full bore
Top entry
Buttwelding ends
